PROFESSIONAL SUMMARY

Java Developer with 1+ year of professional experience in developing and maintaining enterprise applications using Core Java, Spring Boot, Hibernate/JPA, REST APIs, and MySQL. Hands-on experience in backend development, database-driven applications, business workflow automation, and ERP solutions for manufacturing operations. Experienced in developing RESTful services, implementing business logic, database integration, debugging, testing, and production support. Strong exposure to Git, Maven, Postman and Agile development practices.

TECHNICAL SKILLS

Programming:	Java, JavaScript, SQL, HQL
Backend:	Spring Boot, Spring MVC, Hibernate, JPA, J2EE, JDBC, REST APIs, Spring Security
Frontend:	HTML5, CSS3, JavaScript, JSF, Prime Faces, React js
Architecture:	Microservices, MVC, RESTful API Design, Event-Driven Architecture
Databases:	MySQL (stored procedures, HQL queries)
Development Tools:	Git, Maven, Postman, JBoss
Testing:	API Testing, Unit Testing
Methodologies:	Agile, SDLC, Requirement Analysis, Debugging

PROFESSIONAL EXPERIENCE

Junior Software Engineer

May 2025 – July 2026

NirainerAI Innovation Pvt. Ltd., | Chennai

- Developed and maintained enterprise web applications using Core Java, Spring Boot, Hibernate/JPA, REST APIs, and MySQL.
- Developed backend services and business logic for Procurement, Inventory Management, Production Planning, Work Orders, Job Cards, Sales, and Reporting modules.
- Designed database schemas and implemented SQL/HQL queries for business operations, reporting, and data retrieval.
- Developed and integrated RESTful APIs for frontend and downstream application communication.
- Implemented business workflows, approval processes, inventory tracking, stock management, and manufacturing operations.
- Developed responsive application interfaces using JSF, Prime Faces, JSP, XHTML, JavaScript, AJAX, and CSS.
- Performed debugging, issue analysis, testing, UAT support, and production troubleshooting across application modules.
- Collaborated with cross-functional teams throughout requirement analysis, development, testing, deployment, and Agile delivery.

KEY PROJECTS

Plastic Recycled Manufacturing Management System | Java, Spring Boot, REST APIs, MySQL, ERP

- Developed an enterprise Manufacturing Management ERP for a Kenya-based manufacturing organization operating across multiple plants.
- Implemented Procurement, Inventory Management, Production Planning, Work Orders, Job Cards, Sales Management, and Reporting modules.

- Developed multi-plant inventory tracking with material traceability based on material type, grade, color, and plant location.
- Automated manufacturing workflows covering washing, palletization, polythene sheet production, employee allocation, shifts, and production tracking.
- Designed BOM and Work Order engines for material requirement calculation and production planning.

Employee & Customer Management Portal | Java, Spring Boot, MySQL, REST API

- Developed a web-based application for managing employee records and customer information using Java, Spring Boot, Hibernate/JPA, and MySQL.
- Implemented CRUD operations, backend business logic, REST APIs, and database integration for employee and customer management workflows.
- Designed and integrated database entities and persistence layers using Hibernate/JPA for efficient data management.
- Collaborated with the development team to enhance application functionality and ensure seamless module integration and reliable data flow.

Quality Control Automation & Vendor Notification System | Java, Spring Boot, REST API, Email Integration, Rule Engine

- Developed a configurable rule-based Quality Control (QC) validation engine to automate inspection checkpoint evaluation against predefined quality thresholds.
- Implemented business rules and validation logic using Java and Spring Boot to identify QC failures and automate exception handling.
- Integrated REST APIs and email notification services to automatically notify vendors when QC checkpoints failed, reducing manual communication.
- Designed a decoupled REST-based integration layer between the QC validation module and vendor communication service for modular and maintainable system integration.
- Supported workflow automation, API integration, debugging, testing, and validation of QC processes.

INDUSTRY EXPOSURE & CLIENT REPRESENTATION

- **LogMat 2025 & 2026**, Chennai Trade Center — Represented company two consecutive years; presented AI-driven enterprise solutions to logistics and supply chain professionals; gained exposure to supply chain automation trends and industry requirements.

EDUCATION

B.E – Computer Science & Engineering

- Misrimal Navajee Munoth Jain Engineering College, Chennai. | **CGPA: 8.9/10**

2020 - 2024

CERTIFICATIONS & ADDITIONAL

- Java Full Stack Development — JSpiders (Certified, 2024)
- Java Training - Besant Technologies (Certified, 2023)
